OUR GROWTH  
Growth & Achievements

# LETTER FROM OUR EDITOR

Greetings to all readers of the Sealine Journal!

It brings me immense joy and pride to share my thoughts as part of the Sealine Shipping family — a journey that began over a decade ago on July 10, 2013. What started as a role in the warehouse has evolved into a deeply fulfilling career built on hard work, teamwork, and a shared vision for excellence.

As a Warehouse Supervisor, I've witnessed the tremendous growth of Sealine Shipping from the inside out. Over the years, we've transformed challenges into opportunities and continuously adapted to meet the ever-changing logistics landscape. The heartbeat of our success lies in our collective commitment to precision, safety, and seamless coordination across departments.

Every package handled and every shipment dispatched tells a story of dedication — and I am proud to be part of that story. Together, we've built a reputation not just for delivering goods, but for delivering trust.

As we move forward, I am excited about what the future holds for us — with innovation, teamwork, and customer satisfaction at the core of our mission.

Here's to many more years of excellence at Sealine Shipping!

Warm regards,

WAREHOUSE SUPERVISOR

Efficiency, &  
Sustainability”

## BREAKING FAST, BUILDING BONDS: IFTAR WITH THE SEALINE TEAM

# LASHING SPOTLIGHT:

## *Sealine Team Executes Expert Sports Car Lashing*

At Sealine Shipping & Removals LLC, every vehicle we handle is treated with the utmost care — especially when it comes to high-value assets like sports cars. Our recent project involved the secure lashing of a luxury sports car, and once again, our expert team delivered excellence in every step.

Transporting a sports car requires more than just manpower; it demands precision, specialized equipment, and a deep understanding of vehicle dynamics. Our trained crew utilized heavy-duty lashing straps, wheel chocks, and protective padding to ensure zero movement during transit. Each point of contact was double-checked, and the vehicle's structure was safeguarded against pressure points, scratches, or any potential damage.

This operation showcased our commitment to world-class safety standards, attention to detail, and seamless teamwork. From preparation to final inspection, the entire process was executed with clockwork precision — reflecting why Sealine is a trusted name in vehicle logistics across the UAE and beyond.

Whether it's a family SUV or a luxury sports car, our promise remains the same: secure handling, reliable transport, and peace of mind for our clients. At Sealine, we don't just move vehicles — we move trust.

# BRONTO F54 HTD AERIAL WORK PLATFORM

*Lashed by Sealine Team*

Sealine Shipping once again showcased its expertise in handling oversized cargo with the successful lashing of a Bronto F54 HTD Aerial Work Platform — a heavy-duty, high-reach vehicle weighing approximately 20 tons. Known for its advanced engineering and critical use in elevated operations, the Bronto platform demands extreme care and precision during transport, and our team delivered just that.

The operation began with a detailed assessment of the equipment's structure, center of gravity, and load-bearing points. Given the platform's unique dimensions and complex build, customized lashing strategies were implemented to prevent any movement during transit. Heavy-duty chains and tensioners, rated specifically for high-weight industrial loads, were used to secure the vehicle to the base. Additional protective elements ensured that no part of the machinery was damaged or stressed during tightening.

Our team of lashing professionals followed international safety standards, using DNV-certified lashing gear and ensuring compliance with marine transport regulations. The lashing points were carefully calculated and evenly distributed to handle dynamic movements throughout transit.

This project highlights Sealine Shipping's capability in transporting complex, high-value machinery with accuracy and assurance. Whether it's a towering aerial platform or intricate industrial equipment, we ensure secure, damage-free transportation every step of the way. From portside to project site, Sealine continues to lead in heavy equipment logistics — safely, efficiently, and professionally.

For reliable lashing solutions tailored to your cargo, choose Sealine Shipping — where your cargo is in expert hands.

# ECOLOGISTICS

*Driving Green. Delivering Clean.*

***A project aimed at tackling urban freight challenges to minimize local pollution and lower global emissions.***

ICLEI's "EcoLogistics: Low Carbon Freight for Sustainable Cities" project empowers both governmental and non-governmental stakeholders to develop strategies and policies that advance low-carbon, sustainable urban freight solutions—driven by local initiatives and supported at the national level.

Freight vehicles, particularly in urban areas, generate higher emissions and cause more congestion than passenger-only transport. Challenges such as loading and unloading, navigating dense traffic, and managing last-mile deliveries significantly contribute to environmental issues in cities. A key target for the project is the development of national policy recommendations based on the outcomes observed in the project cities.

## Activities:

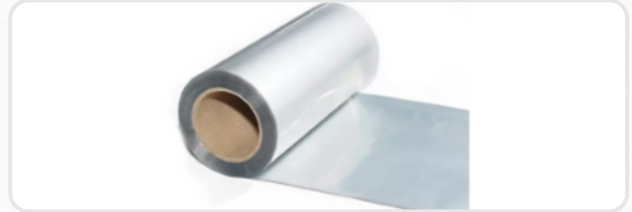

Through the EcoLogistics initiative, local governments engage in the following key actions:

- Assess potential scenarios to implement urban freight mitigation strategies.
- Create customized national policy recommendations for each participating country.
- Document and report progress via the carbonn Climate Registry.
- Form multi-stakeholder working groups to foster collaboration.
- Design and implement a self-monitoring tool to track emissions from urban freight.
- Set specific, measurable urban freight targets aligned with urban master plans, transport strategies, and national climate goals.
- Launch demonstration projects in partnership with relevant stakeholders to showcase sustainable freight solutions.

# OUR PRODUCTS
